Abstract: The purpose of the research is to analyze the training program offered by a telecommunication company in Erbil city. This study applied quantitative study. 100 questionnaires had been distributed among the employees and managers and 93 of them were received. The questionnaire consisted of three parts, demographic, training questionnaire, and employee selection for training. The data collected was analyzed with SPSS V. 20, using descriptive, frequencies, and reliability test analysis. The reliability test is .757, the findings were analyzed and discussed based on the respondents perception. The results indicated the success of the training program to improve the employee’s abilities to solve work obstacles, productivity, efficiency and specifically their performance. The results showed that respondents agree with the relevance of the training program with their tasks and duties.

1. Introduction

The main idea of human resource management is to analyze and improve the capable modest returns in this era of the globalization. One major area of the Human Resource Management is training. Training is a very important part of the human resource development activity of human resource management practice. Few people these days would argue against the importance of training as a major influence on the success of an organization. In order to sustain economic growth and effective performance, it is important to optimize the contribution of employees to the aims and goals of the organizations (Sultana, et al., 2012). Current literatures show that training assist furthermost establishment. Therefore, employees are able to study various work ideas which restore their abilities, increase their work assertiveness and increase efficiency. Employees to carry out their works effectively and efficiently must have the skills, knowledge, values, attitudes and ability to understand their organization’s culture. In order organizations to achieve their goals and objectives training is the best way to increase the knowledge and skill of employee and business activity, which type of training bring economic success and work in the era of competition. Training should help individual performance effect completely on organizational efficiency in the short term and long term obligation. Likewise, in the workplace training is very important, without it, employees don't have a firm grip on their tasks or duties. Employee training refers to programs that offer workers with information, new skills, or specialized development opportunities (Elnaga & Imran, 2013).
Additionally the prime job of training is to improve employees’ ability, so that they can handle present and forthcoming obligations and accountabilities. Each style, applicability and excellence needs to be supported consequently in order for the workers to raise the job inspirational belongings (Amin et al., 2013). A training stage is a basic human major that would develop employees output through emphases on increasing total worker capabilities to overawe their daily work difficulties, and that can direct to the difficult structural increase and growth in the prospect (Amin, et al., 2013). Business environment is changing over the time; organizations always seek for ways to stay at the top level of competitive. This becomes attempt to develop individual employees’ skills, knowledge, and ability in order to grow individual and organizational performance. As such the choice to develop individual employee is as an effect of the introducing of new technology and growing nature of economic actions which has decreased the influence of conservative way of working business actions in such a greatly competitive environment (Kiweean & Asiimwe, 2014). It has been experiential that from last decade telecommunication sector has been increasing in Kurdistan parallel with the boost of globalization and trade many company appeared in this sector.

2. Research Questions

1. How many employees are going through training program?
2. Does the training program offered by the company affect the employee skills?
3. To what extend did the training program increase the employee performance?
4. How relevant was the training to the employee’s work?
5. How does the training program help the employees at the company enhance their work output?

3. Signification of the Study

This study considers the most important part of human resource management which is training, and the active usage of human capital on training and development, also the factors which affect the training process and consist of the part of training, quality of trainer and learners also preferences of learning styles. There are the significant differences currently in relations of the importance of the worker. Workers are very necessary and exclusive resources to all organizations. Training methods should be directly evaluated in order to measure its effectiveness and efficiency that will also create opportunity for workers to get other information to improve the knowledge, and abilities they need.

4. Literature Review

4.1. Training

As one of major activities of human resource management, training has for long been recognized to improve and develop employee performance (Sultana, et al, 2012). Nassazi (2013) defines training as planned and orderly behavior through knowledge events, activities and programs that lead to the achievement of the participants, knowledge, skills and competencies and capacity levels to do their job effectively. Training increase workers’ productivity also improves the services of the worker and brings optimistic change in the organization.
Additionally training plans not only develops workers also aid an organization to make best use of its resource for the benefit of humanity to gain a competitive advantage. Therefore, it looks obligatory by the firm to plan for such training programs for its employee to improve their abilities and competencies needed in the workplace (Elnaga & Imran, 2013). Trainings at the exertion are mostly duty or work adjusted. Foundations which organize training must be capable of accomplishing complicated job performance (Amin, et al, 2013). For improving the organization it’s required that a highly skillful and knowledgeable employee is very necessary for organization (Shaheen, et al., 2013). On the other hand, Organizational learning refers to the efficient procedure to process, understand and respond to both internal and external information of a mainly explicit nature (Tahir, et al., 2014). Training is a learning method that involves achieving the knowledge, skills, rules, idea, or change attitudes and behaviors to improve employee performance. The process that employee gets information and get to know how they will be able to perform the organization are named training (Ameeq & Hanif, 2013).

Any learning activity which is directed the acquisition of knowledge and skills defined for the purpose of occupation or job. Training is the focus of the work or task; gaining or learning from specific terms of reference (Eric, 2012). Training will equipped the employees with necessary tools to acquire sophisticated abilities for performing capable assistances such as the workers struggle to raise better characters with better benefit.

Training not simply develops employee capabilities but the ability to hone thinking and creativity in order to make the best choice at the right time and in new productive way (Elnaga & Imran, 2013). Training is a variety of action which is planned, systematic and it consequences in improved level of skill, knowledge and capability that are needed to perform work effectively (Sultana, et al., 2012). Training is the work of a growth in knowledge and skills of the employee to perform the function of practice. The key result of training is learning. A trainee learns new behavior, refined skills and useful knowledge through the training that will help him get best performance (Amin, et al., 2013).

4.2 Employee Performance

Performance refers to as the results or effect of individual activities within a certain period of time. Employee performance management is necessary for achieve the goals that have the organization itself. Evaluating employee productivity and efficiency is a key measure to him in the general plan of the organization. The same speed production wise is important and that cannot be complete if the employee’s possible and his skill to perform are not considered. Employees' performance is directly connected to organizational efficiency and its achievement. Improved performance of each employee generates huge outcomes which mostly comprise similarity among employees, the quality of production and commitment in the workplace (Ahmed & Shahzad, 2011).

Employees’ performance is basic foundation associated with an organization knowledge staff designed the best of the effectiveness of which can be analyzed during the organization’s performance (Shaheen, et al., 2013). Employee is a key factor of the organization. The success of every organization depends on the employee performance. Employee performance eventually impacts the organization performance. High performance organization is the function model for organizations.
Ahmed and Shahzad (2011) state that the performance does not comprise the consequences of an employee’s behavior, but only in the same behaviors. Performance is about behavior or what employees do, not on what employees produce or the outcomes of their work. Employee performance depends on three factors; determinants of performance such as technical knowledge, motivation and declarative knowledge.

4.3 Training and Employee Performance

The significant effect of training on employees’ performance is to improve the quality and quantity of organization’s production and an increase in the profitability of the organization, maintain the organization strength, reduce the cost and expenses, reduce the risk, improving the organization management’s and establishment of the organization of general and global entities, also, training must be correlated to the mission and performance objective of the organization (Shaheen, et al, 2013).

In addition, the idea of training from the point of view of the employee is principally to obtain skills and knowledge to do the job and to get promotion and career advancement. Training can be defined as knowledge obtained by independent study, or both; the art of acquisition of knowledge, competencies, skills, attitudes, and thoughts retained and used; or modify of performance through experience (Tahir et al, 2014). In fact, there is positive relationship between training and employee performance. Organizations that are devoted to creating profits for its owners, as long as quality service to its customers and beneficiary, provide training for their employees. The more highly motivated a trainee, the more rapidly and scientifically a new skill or knowledge is obtained (Sultana, et al, 2012).

5. Methodology

5.1 Sampling method

For our research, data was collected from employees in a private company in Erbil city; the method used to select respondents was random sampling, the target sample for this study is 100 employees in a telecommunication company. Totally we conducted 100 questionnaires among the company employees and we have received 93 questionnaires.

5.2 Ethical Considerations

We as researchers have considered and followed all the ethical considerations in undertaking our research and considered all the recommendations for conducting questionnaire. Likewise, we did not force any respondent to fill the questionnaire; the questionnaire was totally optional for every single respondent.

5.3 Data Collection

Our research is based on a review of academic research paper, journal articles, survey, books and some government publication. The primary data has been collected through questionnaires. We have conducted the questionnaires in English language. The questionnaire consisted of three parts;
demographic, training questionnaire, and employee selection for training. The demographic questions were close ended questions; choices were given to the respondents. The respondents were asked about their age, gender, education, marital status, job experiences and task or position in the first part (demographic). Second part is the training questionnaire consisted of 12 closed-ended items to evaluate (Training and employee performance) using 5 point Likert scales from (strongly agree to strongly disagree) the 12 items have been developed by (Nassazi, 2013) and the third part is to collect information about the selection of the employees to take the training program and the frequencies of taking the training program.

5.4 Limitation of the Study

Our research and results can possibly generalized in telecommunication sector, more specifically in private telecommunication companies in Kurdistan region but it cannot be generalized in all other telecommunication sector, because we have taken one company of Telecommunication as a case for our research. Likewise, another limitation of the study is, there is not much information and published articles about training and employee performance in telecommunication sector specifically conducted in this region.

6. Results and Discussions

For the research, 100 questionnaires have been distributed among the employees in the company and we have received 93 of them. The following tables are taken by analyzing the data in SPSS Version 20 through using descriptive and frequencies analyses and reliability test.

<td>44</td>
<td>44.0</td>
</tr>
<tr>
<td></td>
<td>Once in our career</td>
<td>12</td>
<td>12.0</td>
</tr>
</tbody>
</table>

Table 3, indicates that majority of respondents have taken the training course based on the supervisor’s recommendation, but 22 of the respondents have taken the training course as a prerequisite term to join the company.

Table 4 – Reliability Test

<table>
<thead>
<tr>
<th>Cronbach's Alpha</th>
<th>N of Items</th>
</tr>
</thead>
<tbody>
<tr>
<td>.757</td>
<td>12</td>
</tr>
</tbody>
</table>
The Cronbach’s Alpha of the questionnaire is .757 with 12 item, which is greater than .6 indicate that the questionnaire is reliable for this study.

7. Conclusion

The purpose of the research is to analyze the perception of respondents on training offered by the company and employee performance in the telecommunication sector in Erbil city, Kurdistan region. Thus, we have taken a case of a telecommunication company in Erbil to study and apply our research questions. The study aimed to assess the training program offered by the company and the employee performance and skills. Overall, based on the perception of the employees, the findings indicated the success of the training program to improve the employee’s abilities to solve work obstacles, productivity, efficiency and specifically their “performance”. The results showed that respondents agree with the relevance of the training program with their tasks and duties.

SUBMISSION PROCEDURES

Authors should comply with the following guidelines when preparing papers for publication in the journal

1) Manuscript Submission: Kindly submit your manuscript as e-mail attachment via this email: ijsjesjournal@gmail.com. The manuscript must be submitted in MS-WORD file format.

2) Format: We only accept manuscripts in English language. 3000-8000 words are preferred. The document should be typed in Times New Roman 11 pt font.

3) First Page:

   Title
   Concise and informative. Titles are often used in information-retrieval systems. Avoid abbreviations and formula where possible.

   Author’s names and affiliations
   Please indicate the given name and family name clearly. Present the authors’ affiliation addresses (where the actual work was done) below the names. Indicate all affiliations with a lower-case superscript letter immediately after the author's name and in front of the appropriate address. Provide the full postal address of each affiliation, including the country name, and, if available, the e-mail address, and telephone number of each author. Omit all titles (e.g., Dr., Professor) and degrees (e.g., PhD, PsyD, EdD).

   Abstract
   A concise and factual abstract is required (maximum length of 200 words). The abstract should state briefly the purpose of the research, the principal results and major conclusions.

   Keywords
   Immediately after the abstract, provide a maximum of 5 keywords, avoiding general and plural terms and multiple concepts (avoid, for example, ‘and’, ‘of’).

   Headings
   Top-level headings (Heading 1) are numbered 1, 2, 3,
   Second-level headings (Heading 2) are numbered 1.1, 1.2, 1.3,
   Third-level headings (Heading 3) are numbered 1.1.1, 1.1.2, 1.1.3,

4) References:

   References should follow the APA Style 6th Edition
   The following are examples of a journal article, a book, and a book chapter
